

Double-walled system with nylon corners

Panel thickness 25-40 mm
External dimension 40 mm

The most efficient method to create AHU modules with continuous internal surfaces, without wedges and interruptions. This particular profile design, allows for the use of both traditional panels and double wall panels. In any case, the fixing screws of the panels remain hidden in the chamber of the profile. The resulting surfaces are thus free of protrusions and therefore easily washable.

Cutting conditions of the profiles

$$A = Y - 120 \text{ mm} / 4.68''$$

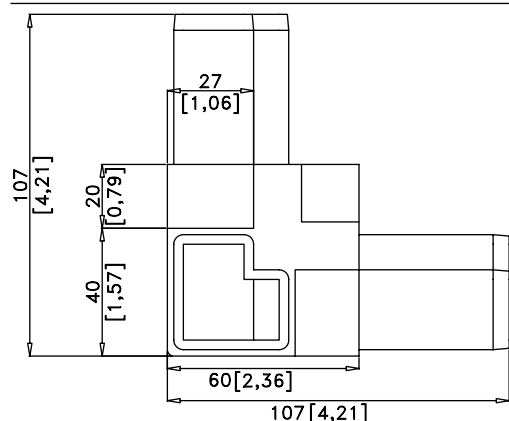

$$C = Y - 120 \text{ mm} / 4.68''$$

The formulas are valid for all sides of the module
Y = external dimension

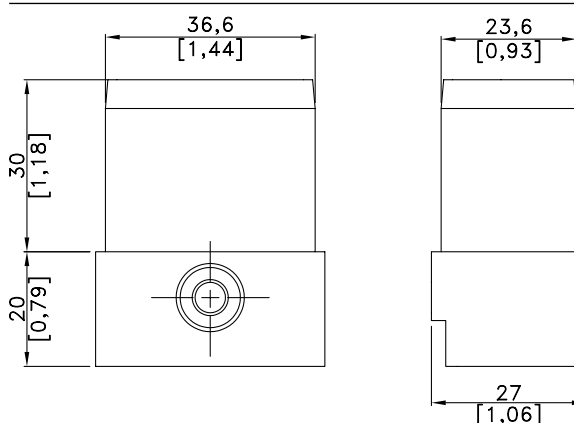

Nylon accessories

AFGDP40-25 Main corner	GFG240-250 Omega joint	TECHNICAL DATA	
		Panel thickness	25-40 mm / 0.98-1.56"
Weight: 123 g	Weight: 21 g	Material	PA6 + GF 20%
		Color	Black
